## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

**Claims 1-12, 15, 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pan (5016963).**

Pan (fig. 2) teaches a fiber device comprising a sleeve having an elongated tubular body with an input terminal and an output terminal;

an input fiber ferrule (IFF) placed in the sleeve at the input terminal;

a plurality of pump fibers bundled together at one fiber terminals by the IFF to form a pump fiber bundle, wherein end facets of the bundled fiber terminals are polished to form an optical pump coupling surface for outputting pump light from the pump fibers;

an optical fiber ferrule placed in the sleeve at the output terminal;

Pan does not expressly teach a double clad. This however would have been obvious because Pan does teach a multimode fiber here and it is notoriously well known (NWK) in the art to use a double clad in multimode fibers in such applications; the double clad elements of the claim are all NWK in such applications; and

a lens disposed in the sleeve between the input and output fiber ferrules; it is NWK to use such a lense such that the lens has a numerical aperture (NA) not greater than a NA of the inner cladding layer.

Thus claim 1 is rejected.

It is NWK to have an acute angle. Thus claim 2 is rejected.

Claims 3-5, 7-9, 10-12 also are NWK. Thus claims 3-5, 7-9, 10-12 are rejected.

Pan teaches a GRIN lens. Thus claim 6 is rejected.

By the reasons and references given above each element of claim 15 is also rejected.

Claims 17 is also NWK. Thus claim 17 is rejected.

By the reasons and references given above each element of method claims 18-20 is also rejected.

### ***Allowable Subject Matter***

Claim 13-14, 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
